

Generic API Error Handling and Faults

[Go to full article](#)

Overview

This article contains generic errors and faults common to all Emersion's APIs.

Specific errors for a particular operations are documented on the operation's specific [API library](#) entry.

End User APIs

Error	Description
Login token must be valid for the end user	The login token does not belong to the end user. Check the username and password matches the end user account and is correct.
The token has expired	Authentication tokens automatically expire 12 months after they are created. Use the log in operation to generate a new token.
