

ConnectWise Connection Settings

[Go to full article](#)

Overview

The ConnectWise Integration **Connection** settings page enables the integration between Emersion and ConnectWise to occur.

API User

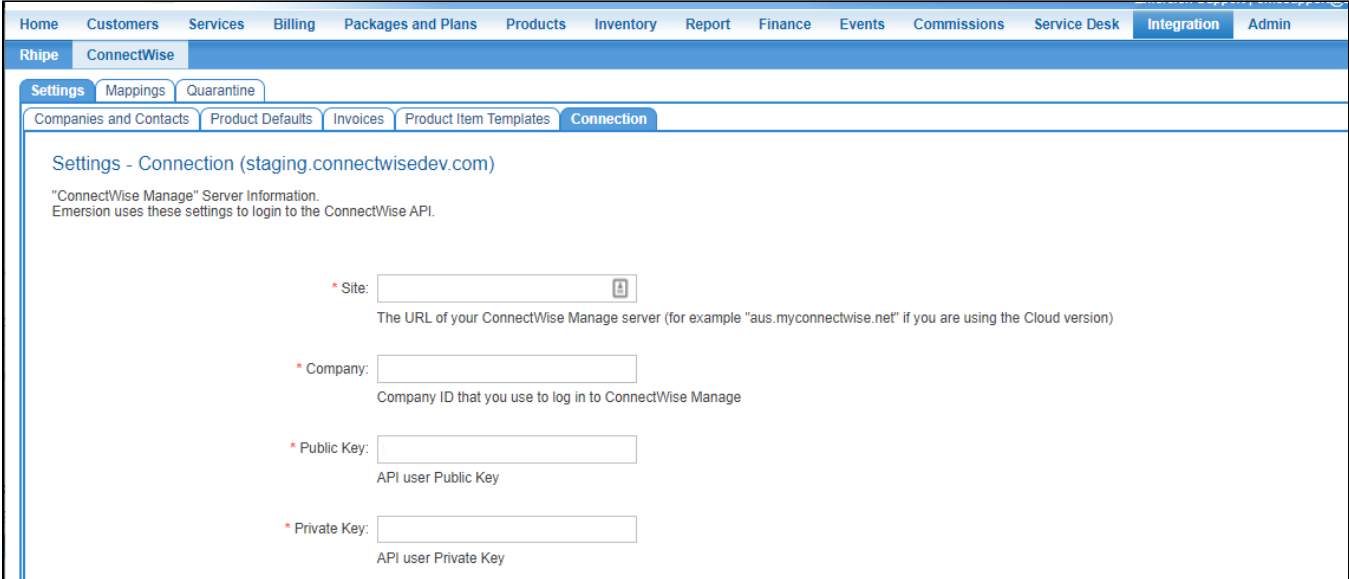

In order for the Emersion system to log in to your ConnectWise instance, an active API user will need to be set up in ConnectWise. We suggest it be called "EME User" or something similar.

 If you do not know how to create an API user in ConnectWise, please consult the ConnectWise University.

The API public and private keys need to be configured in Emersion.

Configure Server Settings

To access the page, navigate to: **Integrations > ConnectWise > Settings > Connection**

Enter your **ConnectWise Manage** server settings into the following fields.

Field	Description
Site	The URL of your ConnectWise Manage server.
Company ID	Enter your ConnectWise Company ID.
Public Key	This is an alphanumeric string from the ConnectWise API User details.
Private Key	This is an alphanumeric string from the ConnectWise API User details

When you are finished, press **Save**.
