

Map Product Price Types

[Go to full article](#)

Overview

Service providers need to define which of Emerson's product price type groups and price type match the ConnectWise units of measure.

In Emerson, the "unit of measure" corresponds to two values:

- a product price type group
- a price type (based on the group).

This is a single value in ConnectWise, not two like Emerson.

When Emerson's products are synchronised to ConnectWise, the integration needs to assign a unit of measure.

This article guides users to set up how units of measure are synchronised from source to destination using the ConnectWise Integration.

Synchronisation Support

This mapping is only used when products are set to **Push: Emerson ConnectWise**.

For service providers who are syncing products in the other direction configure the [Unit of Measure mapping page](#).

Map a Product Price Type to a Unit of Measure

To access the company types mapping page, go to **Integration > ConnectWise > Mappings > Product Price Type**

Company Type	Company Status	Communication Type	Tax Code	Unit of Measure	Product Price Type	Category
Mappings - Product Price Type						
Emerson Product Price Type Group	Emerson Product Price Type	Connectwise Unit of Measure

For each Emerson product price type group/price type combination, choose:

- an Emerson product price type group to map it to.
- an Emerson product price type to map it to.

Complete the mapping for all product price type group/price type combinations that you use in Emerson are configured with a unit of measure in ConnectWise.

When you are finished, press **Save**.
