

AAPT IP-Line

[Go to full article](#)

Service type ID: 3277

Service Type name: AAPT - IP-Line (Auth)

Carrier: AAPT

Emersion IP Addresses

Sometimes carriers need to add Emersion's IP addresses to the white list in their firewall.

[Click here for Emersion IP Address list](#)

IP-Line (Auth)

This service type is currently available for *Layer 3* services only. *Layer 3* services are services whose end users authenticate to AAPT's infrastructure, rather than infrastructure belonging to the service provider (which would be *Layer 2*). **Radius** is a type of server used to authenticate users to the internet. If your users authenticate to Emersion or your own infrastructure, this is *Layer 2*. If your users authenticate to your carrier's **Radius** infrastructure, this is a *Layer 3* service.

Service Configuration

In order to enter services, Emersion will require you to supply the following information to configure the service:

- Username
- Password
- Realm

The Radius realm(s) used by end users is a drop-down selectable list. Before you can enter any services, Emersion must configure the realm(s) used by the service provider so they appear in this list.

AAPT's default option at the time of publication is ip-line.aapt.com.au, however they often set up custom realms for service providers to use. Once Emersion configures the realms for your service provider account, you can enter your **IP-Line (Auth)** services.

Submit your realms and the service type the realm(s) will be used for to Emersion via a support ticket. If you are currently onboarding, this should be supplied in the project ticket for **IP-Line (Auth)**.

AAPT Usage Collection

What we require to collect usage for all AAPT service types [is in this article](#).
